IT-001 | ONBOARDING ACCESS

How is an account created for a new employee?

The hiring manager submits the onboarding access form at least three working days before the employee's start date. The request identifies the role, start date, and approved systems needed for the role. IT provisions a named account after verifying manager authorization. Shared credentials are not issued as a substitute for onboarding. Requests for sensitive systems may require an additional data-owner approval.

IT-002 | MULTI-FACTOR AUTHENTICATION

Is multi-factor authentication required for company accounts?

Multi-factor authentication is mandatory for company accounts that support it. Employees should enroll a company-approved authenticator application or security key during onboarding. SMS-based verification is reserved for an IT-approved recovery situation and should not be the normal method. Never approve an unexpected authentication prompt. If a prompt appears without a login attempt, deny it and contact the Service Desk.

IT-003 | PASSWORD RESET

How should I reset a forgotten password?

Use the company self-service password reset page from a trusted device. If the recovery method is unavailable, contact the Service Desk for identity verification before any reset is performed. Do not send passwords or recovery codes by email or chat, and do not ask a colleague to sign in on your behalf. After restoring access, review recent authentication prompts and report anything unfamiliar.

IT-004 | PHISHING

What should I do after receiving a suspicious email?

Do not click links, open unexpected attachments, or reply with credentials. Report the message using the phishing-report button or forward it as an attachment to security@cedarbridge.example. If a link was clicked or information was entered, contact the Service Desk immediately and explain what happened. Do not delete the email until the security team has advised whether it is needed for investigation.

IT-005 | LOST DEVICES

How quickly must a missing company laptop or phone be reported?

Report a lost or stolen company device to the Service Desk and Information Security within one hour of discovering the loss, whenever safely possible. Provide the device type, asset tag if known, last known location, and approximate time of loss. IT may suspend sessions or remotely protect managed data. Do not attempt to recover a stolen device through unsafe personal action.

IT-006 | ACCESS REVIEWS

How often is access to internal applications reviewed?

System owners and reporting managers review user access at least quarterly. The review confirms that permissions still reflect each employee's current duties and removes unnecessary access. Managers must also request prompt removal or adjustment when an employee changes role or leaves the company; they should not wait for the next quarterly review. Privileged access requires separate approval and a documented business need.
